PROFESSIONAL SUMMARY

Data Engineer and Analyst with hands-on experience building production-style ELT pipelines (S3 → Snowflake → dbt → Airflow) and delivering end-to-end analytics across statistical experimentation, BI dashboarding, and customer behavior modeling. Proficient in SQL, Python, dbt, Snowflake, Power BI, and Tableau — with a track record of processing 10M+ record datasets, enforcing data quality at scale, and translating findings into quantified business impact.

SKILLS SUMMARY

- **Languages:** SQL (CTEs, Window Functions, Joins), Python, MySQL
- **Libraries:** Pandas, NumPy, Matplotlib, Scikit-Learn, SciPy, Statsmodels
- **Data Engineering:** dbt (Models, Seeds, Snapshots, Macros, Incremental, SCD Type 2), Snowflake, Apache Airflow (DAGs, Docker), Amazon S3 (External Stages, COPY INTO, Storage Integration), AWS IAM, ELT Pipelines, Medallion Architecture
- **Analytics & BI:** Power BI (DAX, Power Query, Star Schema), Tableau (LOD Expressions, Tableau Public), A/B Testing, Statistical Inference, Hypothesis Testing, EDA, KPI Development, Cohort Analysis, RFM Modeling, Churn Analysis, ROI Analysis
- **Tools:** MS Excel (Pivot Tables, Power Query), Jupyter Notebook, Git, GitHub
- **Soft Skills:** Stakeholder Communication, Technical Documentation, Business Insights Presentation, Effective Communication

PROJECTS

Zomato Batch Data Pipeline — End-to-End ELT

Aug 2026

S3, Snowflake, dbt, Apache Airflow, Python, SQL | github.com/tanayjujarao-py/zomato-batch-pipeline

- Built a production-style batch ELT pipeline ingesting 10M+ orders, ~23M order items, and 300K reviews from Amazon S3 into Snowflake via keyless IAM storage integration; implemented Bronze/Silver/Gold medallion architecture with incremental fact tables (MERGE) and SCD Type 2 snapshots.
- Orchestrated as a zero-manual-step daily Airflow DAG (Docker) — reload_raw → dbt_build; built Gold business marts covering city GMV, restaurant performance, and delivery SLA (p50/p90); enforced data quality via automated dbt tests across all layers.

Airbnb Data Engineering Pipeline — S3 → Snowflake → dbt

Aug 2026

S3, Snowflake, dbt, Python, SQL, Jinja | github.com/tanayjujarao-py/airbnb-data-engineering

- Designed end-to-end ELT pipeline ingesting Airbnb CSV data (hosts, listings, bookings) from AWS S3 into Snowflake via external stages; built Bronze/Silver/Gold layers with incremental dbt models (unique_key MERGE) and SCD Type 2 snapshots for historical attribute tracking.
- Delivered Gold layer with fact models, ephemeral models, and One Big Table (OBT); enforced integrity via dbt tests (not_null, unique, accepted_values, custom singular); built reusable Jinja macros eliminating SQL duplication across models.

A/B Testing Analysis — Website Conversion Experiment

Jul 2026

Python, Pandas, NumPy, SciPy, Statsmodels, Matplotlib | github.com/tanayjujarao-py/ab-testing-analysis

- Applied Two-Proportion Z-Test and 95% Confidence Interval on ~5,000 user sessions to validate conversion rate improvement from 5.40% to 14.07% ($p < 0.001$); confirmed experiment randomization via Chi-Square Tests across Device and Location.
- Performed Welch's t-tests on engagement metrics to rule out side effects; delivered a statistically and business-justified deployment recommendation with full GitHub documentation.

EDUCATION

SSBESITM, Nanded, India

2026 – 2029

Bachelor of Computer Application

CERTIFICATIONS

- **Data Analytics Job Simulation – Deloitte Australia** (Industry analytics workflow, reporting, stakeholder communication) Nov 2025
- **Python for Data Science – IBM** (Python, Pandas, NumPy, data manipulation & visualization) Jan 2026
- **GenAI Powered Data Analytics Simulation – TATA** (AI-assisted analysis, business problem-solving) Dec 2025
- **Intermediate Machine Learning – Kaggle** (XGBoost, Scikit-Learn Pipelines, Cross-Validation) Apr 2026
